

Vivideo Case Study 3 — Competitor Product Analysis

Make us the best-informed team in the AI video space. Real insights, zero slop.

About Vivideo

Vivideo.ai is an AI video generation platform: users turn text, images, and ideas into short-form videos (TikToks, Reels, Shorts) and avatar videos, published to connected socials, on a credit-based subscription (PRO/MAX) — in one of the fastest-moving, most crowded markets on the internet. We're a small team of high-agency, very technical engineers — everyone does everything, and we ship fast.

The case

Your mission: perform a deep competitor product analysis and deliver it in whatever form maximizes our understanding. The bar: after consuming your deliverable, we should know every meaningful competitor's strengths, weaknesses, pricing psychology, funnel tricks, and blind spots well enough to discuss any of them in a strategy meeting — without ever opening their product ourselves. And we walk away with a clear list of what to steal, avoid, and attack.

What "not AI slop" means (read twice): we will reject an analysis a language model could write without touching the products — feature lists from pricing pages, "strengths: user-friendly interface", interchangeable SWOT grids. Real insight comes from *using* the products: "their \$29 plan is priced per **export**, not per generation — users get invested for free, then hit the paywall at maximum sunk cost. Screenshot attached." Use AI tools freely (we do, daily) — the evidence must be first-hand.

Must-haves

- 1. Map the landscape, then go deep.** A full map of who actually competes with us (short-form/social AI video, avatar platforms, prompt-to-video products, clipping tools), then a **hands-on teardown of the 5–7 that matter most**. Candidates to challenge, not just accept: revid.ai, invideo.io, fliki.ai, synthesia.io, heygen.com, pika.art, runway, veed.io, opus.pro. Your selection, justified.
- 2. First-hand evidence for every deep-dive.** Sign up, generate, hit paywalls, screen-record. For each competitor: product quality (run a **fixed set of test prompts** across all of them, and Vivideo, so claims are comparable); onboarding and the first 5 minutes; pricing/paywall/cancellation psychology; strengths worth stealing (mechanisms, not adjectives); weaknesses worth attacking (real user voice — Reddit, G2, app-store reviews, quoted and linked); distribution (SEO footprint, affiliates, template galleries).
- 3. The "so what" for Vivideo.** Synthesis is the deliverable: a prioritized steal/avoid/attack list plus the 2–3 biggest threats in the next 12 months — every item traceable to something you observed first-hand.
- 4. Format that maximizes understanding.** Any format — doc, Notion, web page, video walkthrough, dashboard. Layered (skimmable top, evidence underneath), visual where visuals win (side-by-side outputs, funnel screenshots). A 60-page wall of prose fails even if the research is good.

5. **It must stay alive.** Include a lightweight, working freshness mechanism: pricing-page diff watcher, changelog/review-stream alerts, or a repeatable checklist. Small and working beats a paragraph of intentions.

Nice-to-haves (pick what excites you): the same 5 prompts rendered by every competitor, side by side; a recorded 30-min analyst-style briefing; review mining at scale (quantify weakness themes); model-level analysis (who runs on Veo/Kling/Sora/WAN, and what it means for costs).

Deliverables

1. **The analysis** in your chosen format, with evidence (recordings, screenshots, outputs, linked review quotes) attached.
2. **The freshness mechanism** (repo/script/checklist) with a README showing it works.
3. **One-page executive summary:** the 10 things we must know + your top 5 recommendations.
4. **Spend report:** what you bought on the company card and why (trials, subscriptions).

Evaluation rubric

Criterion	Weight	What we're looking for
Depth & first-hand evidence	35%	You clearly <i>used</i> everything. Claims backed by recordings, outputs, real user voice.
Insight quality (anti-slop)	25%	Findings that surprise us and change what we build or price. We know this market — we'll notice.
Actionability	20%	A steal/avoid/attack list usable in next week's planning.
Communication & format	10%	Maximum understanding per minute spent.
High agency & staying power	10%	Paywalls and messy data navigated solo; a working way to keep it fresh.

Logistics

- **Compensation:** this case is paid — **\$50 on completion, regardless of outcome.**
- **Spending:** use the company card shared with you — we *encourage* buying competitor subscriptions to get past paywalls and see the real product. Spend responsibly: cheapest plan that unlocks what you need (weekly/monthly, never yearly).
- **Timeline:** no fixed cap — ship when you're proud of it (strong submissions usually land within ~a week). Tell us your ETA.
- **AI tools:** use anything — we do. Evidence must be first-hand, and we'll pick three of your findings at random and go deep on them with you.
- **Questions & submission:** reply on the thread where you received this case.

We really want to see high agency and end-to-end working stuff. Surprise us.
